To: All Council Members of the Energy Efficiency Advisory Council
From: Felicity Luebke, Teacher

Dear Members of the Energy Efficiency Advisory Council:

I am a resident of Brewster, MA and get my green energy through NStar. I purchase 100% green power from MassEnergy.

I am writing to you today to give my strong support for adopting resolutions that will maximize energy efficiency for the state of Massachusetts. The three year plan which is currently in place does not meet the criteria called for by the Clean Energy and Climate Plan for 2020. The Green Community Act and the Global Warming Solutions Act both require that all cost effective energy efficiency be captured, yet there is an abundance of energy saving that is not being realized by the commercial and industrial sector of our economy.

It makes sense to prioritize the three year plan with objectives that call for energy efficiency over those that call for new pipelines, and production of non-renewable resources. Utility companies agree that energy efficiency is the best direction to take against rising energy costs.

I urge you to develop energy saving goals now so that we can meet the mandates set forth for 2012.

Sincerely,

Felicity Luebke
