

To Whom it may concern:

Energy efficiency plans in the Commonwealth of Massachusetts must not misinform the public regarding any alleged "renewable energy" status from dirty wood biomass. We are in a Climate Crisis where past perceptions regarding renewable energy no longer apply. We no longer have the luxury of waiting 75 to 100 years for logged forests to regrow and regain all the carbon lost to the atmosphere during the harvesting and production process, even if those forests were able to regain their former health which is doubtful. Wood biomass is NOT truly renewable and any wishful thinking leading to governmental promotion of wood biomass would be both counter productive and dishonest.
