Strategic Electrification & Energy Optimization Demonstration Project

- Authorized by statute (St. 2022, c. 179, §87A, “Section 87A”)
- EEAC supported CVEO through several iterations
- Department, DPU 22-137, approved ~$6.1M budget in January 2023
- Focus is low-and moderate-income customers residing in deed-restricted housing
  - Fully decarbonize/electrify oil, propane and electric resistance heated homes
    - Installing cold climate heat pumps, heat pump water heaters and electric stoves
  - Install solar PV systems to support electrification of the home
  - Install limited number of battery storage systems for demand response and resiliency
- June 2024: CLC has enrolled 84 participants for a CVEO home energy assessment
  - 16 CVEO participants completed installation of CVEO technologies
  - 55 of the 84 should complete installation of CVEO technologies by end of 2024
- CLC is requesting authorization to complete CVEO during the 2025-2027 plan within the DPU approved $6.1M budget
