Eric,

Below is my summary of the points that I want changed in the resolution. Let me know what you think. can we talk today?

Line
62 "we expect that the individual plans will be fully consistent with the statewide plan" Is this what they really mean in the rest of the paragraph

94 " We expect the council to sustain its collaboration with the PAs to alalyze new lessons…" change to - " We expect the PAs to analyze new lessons learned, develop adjustments and put them into practice.

97 "the draft plan from the PAs reflects the negotiated higher goal levels, as well as most council recommendations" change most to some or delete "as well as most council recommendations" (this is an important change for me because I know they did less than 50%)

105 "develop a performance-based retrofit product for these situations" change to " develop and offer a performance-based retrofit product for these situations"

106 "MTAC process to approve new technologies into programs" change approve to implement

110 "regular updates to the Council on C&I program progress" change progress to penetration (we already get reports on what they are doing we need to what extent they are succeeding.

115 "we recommend that the DPU continue to investigate" change to "we recommend that the DPU complete its investigation for the need for greater state-wide….

In addition I believe we should add the following recommendations to this resolution which were in the July council resolution.

Recommendation #
63&67 - 63 commit to assessing cost effectiveness of SEM projects and if so commit to a demonstration project. 67 Commit to implementing and evaluation a behavior demo project for small and medium C&I customers

99 provide dates and completion of extensive review of HES program and plan for implementing opportunities

From the term sheet regarding the New Demand Reduction/ Peak Reduction Efforts "demand savings group that includes DOER, the AG, and the low income affordability network…" need to add " and other interested councilors"
