Energy Efficiency Advisory Council
RE:Public Comment - Residential

I would like to propose for your consideration the following three item in order to save money:

1. The adoption of one set of rules for all Public Utilities. This would decrease the cost of administering the program and would streamline processes.
2. That this Council look for ways to limit the liability of the Utilities. A lot of the decisions are made based on fear of getting sued and for good reason. This also stifles progress and is very costly.
3. There should be a faster way to make changes and to adopt new products when the science and the safety have been resolved and these are clear improvements to the program. I recommend that a new way to resolve these issues be implemented.
