Subject of Comment

Concern we are not moving quickly enough to reduce carbon in the atmosphere. Efficiency of energy consumption is not enough. EEAC must more actively push toward converting MA to renewable energy supplies and not continue to support natural gas distribution. Funds should be increased in areas that have face the most pernicious contamination consequences. More education to members of population not currently using MassSave services in imperative. We have used them & referred neighbors & friends in Reading but what about less affluent communities? Thank you.

Date of related EEAC Meeting (If applicable)

05/15/2024
