

Dear Sirs

*Approximately 10 years ago, in an attempt to reduce our electric and fuel oil usage, we switched from an electric hot water tank to an indirect hot water tank system off our boiler.*

*This spring, thanks to the current incentives, we finally switched over to a solar hot water system.*

*We feel great about what we have been able to do to decrease our reliance on fossil fuels and our reduction of carbon emissions.*

*Now we encourage you to increase the incentives for more Massachusetts homeowners to participate, by supporting the following request to add a rebate for solar hot water systems. There is a great need, and solar hot water is well worth the investment.*

*See attached letter.*

*John Henry and Deb Porter*
