

Additional comments/ incentives

- 1) I would like to see a pilot program for residential neighborhood resilience micro grids i.e. There are many neighborhoods on cape cod where the transmission lines are underground. If enough of the homeowners on such a street had PV arrays there would be some shared battery storage for critical loads only - Furnace or heating, well pump and refrigerator
- 2) Incentives to install inverters for critical loads only to be used with battery storage
- 3) Encourage the use of AGM batteries rather than LI-ion batteries for residential energy storage. Li-Ion has extractive and end of life issues

Thank You
Bob
