

I strongly encourage EEAC to change the role of Mass Save away from replacing home heating systems with natural gas to use heat pumps instead. There is no point in installing new fossil fuel systems that will be in use for the next twenty years when we need to get away from such equipment now.

The technology is available now. The Roadmap bill makes clear the time for conversion to renewable energy heating and cooling systems is also now.

Thank you for giving me the opportunity to have input in your process.

Richard Kalish
