

Hello,

As part of the EEAC Energy Efficiency Three-Year Plan, I am writing in support of the MassSave Residential Rebates and Incentives.

As a homeowner, these rebates encouraged my household to insulate our 1920s condo in Somerville, as well as to purchase a more energy efficient water heater.

As a developer of affordable housing, the MassSave incentives have been important to the development projects I work on to provide incentives to study Passive House for projects, as well as to provide rebates for the installation of more energy efficient systems. I have watched how the MassSave program has helped move the affordable housing industry in Massachusetts towards doing more Passive House new construction. I hope the next three-year plan for MassSave will continue to provide rebates and incentives to promote the development of more energy efficient buildings in Massachusetts.
